

Data & Artificial Intelligence Platforms

Break down data silos and capitalize on your data. AHEAD's data and AI platforms offer critical oversight in areas like privacy, security, transparency, risk mitigation, and governance – ensuring that end users place trust in the insights generated while minimizing the risk of data exposure for both the business and its users.

Roadblocks to Successfully Leveraging Data & AI

Data Silos

75%

of companies report data silos as a roadblock to internal coordination

40%

have witnessed rising data silos

The Cost of Fragmented Data

\$41.1B

Data management now makes up the largest segment of IT budgets.

To drive innovation and work more intelligently, enterprises need solutions that break down data silos while delivering integrated data governance, accessibility, visualization, and insight.

AHEAD's Data & AI Solutions

Data & AI Envisioning

To identify valuable AI use cases, AHEAD facilitates collaborative workshops with your technology and business teams designed to gain alignment on objectives, ideate on opportunities, and assess implementation viability. The output is a catalog of use cases mapped to critical dimensions like expected business impact, policy and compliance factors, key implementation barriers, and metrics to gauge success. We prioritize the use cases that deliver initial value while cataloging more transformational efforts to feed a data and AI roadmap.

Data & AI Governance

AHEAD's Data Governance solutions establish policies and controls to manage data as an organizational asset, improving quality and integrity. We bridge communication gaps between business and IT to provide stakeholders relevant data that advances company goals. Our automated governance platforms cultivate behaviors that leverage data as a competitive strength rather than a departmental function.

Data Platform Modernization

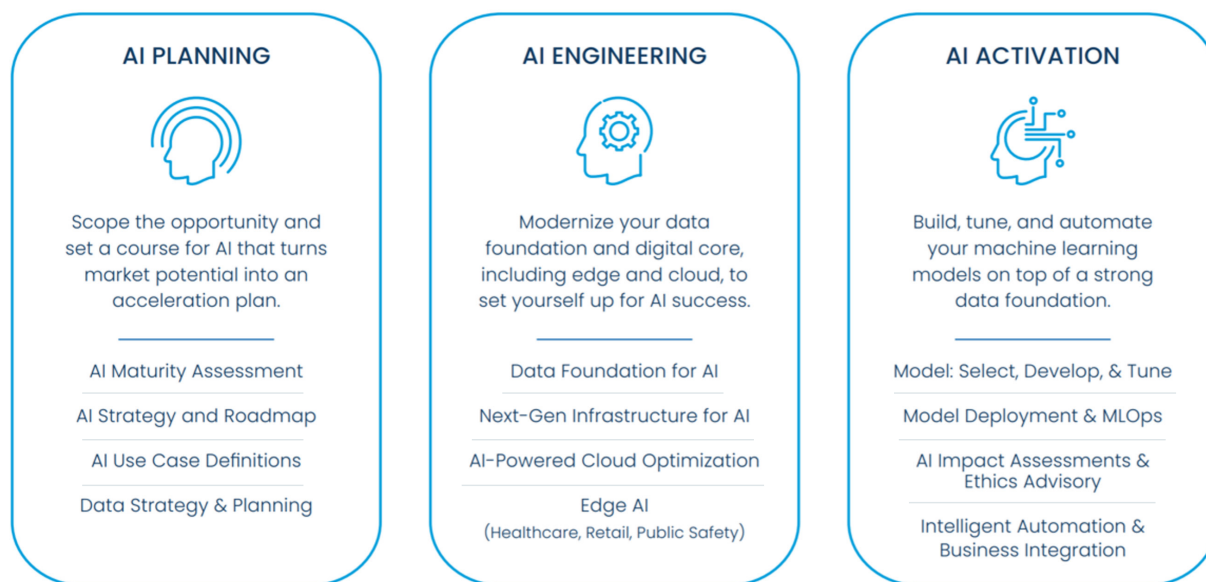

Transitioning to a modern data platform is crucial for business competitiveness but challenging to achieve alone. AHEAD works with your key stakeholders to define an optimized conceptual data architecture, mapping high-priority data flows and outlining a modular modernization roadmap tailored to business needs. Using agile methodologies, AHEAD experts work with you every step of the way – even post-implementation – to build and maintain a data platform that fuels business outcomes with minimal disruptions.

Data & Analytics Visualization

AHEAD's Data and Analytics Visualization solutions enable deeper context and faster analysis to support data-driven decision making using live, interactive dashboards that transform raw metrics into visual stories and insights for business leaders. Following a metrics-to-analytics-to-data approach, we ensure that the information is organized into interpretable formats that function as a single source of truth to spark conversation and align action across teams.

Why AHEAD?

AHEAD's Data and AI team brings deep expertise to help organizations navigate the AI journey from strategy and planning through customized AI solutions and business integrations.

Begin Your Data & AI Journey

Get in touch with AHEAD to schedule an AI planning workshop to map your data landscape and identify high-impact AI opportunities tailored to your business goals. Our experts can conduct assessments to surface priority use cases, while detailing data and infrastructure prerequisites to set up long-term AI success.
